

USB-to-CAN V2 Plugin

The USB-to-CAN V2 Plugin enables the simple and fast implementation of a CAN interface into customer devices. At this, it is especially suitable for applications with limited space thanks to its compact dimensions. Due to its attractive price and compact design, the USB-to-CAN V2 Plugin interface is ideally suited for use in series production.

The Ixxat USB-to-CAN V2 Plugin is based on the latest USB-to-CAN V2 family. The interface has the same characteristics as the other USB-to-CAN V2 variants and is fully supported by the Ixxat driver packages for Windows (VCI) and Linux (ECI).

SOFTWARE SUPPORT

Drivers and programming interfaces

Comprehensive and powerful driver and software packages for the USB-to-CAN V2 Plugin series are available for free at ixxat.com/support. The driver packages can be downloaded for Windows (VCI - Virtual Communication Interface) and Linux (ECI), and are available on request for various real-time operating systems (INtime, RTX, Vxworks, QNX).

Using the Ixxat driver packages, customers can easily switch between the different PC interfaces offered by HMS. This would allow them to use USB, PCIe, Ethernet or other PC connections without changes to their application. The drivers support all protocols available on the interface with one API, so customers can easily access CAN, CAN-FD and LIN simultaneously and get the data with a common time stamp.

Softwaretools

The software tool canAnalyser3 Mini is included in the VCI V4 download package and enables the first analysis steps and monitoring in CAN networks. Further information about the tools as well as Demo/Trial versions are available on the [Ixxat](http://ixxat.com) webpage.
